

WHAT'S NEW

Week 17 · April 20-24, 2026

/ultrareview opens as a research preview, automatic session recaps when you return to a terminal, custom color themes you can build and ship in plugins, and a redesigned Claude Code on the web.

Releases **v2.1.114** → **v2.1.119**

4 features · April 20-24

/ultrareview research preview

Now in public research preview. Ultrareview runs a fleet of bug-hunting agents in the cloud against your branch or a PR, and findings land back in the CLI or Desktop automatically. Run it before merging critical changes such as auth or data migrations.

Review the branch you're on:

Claude Code

> /ultrareview

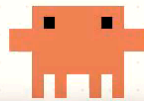

Or point it at a PR:

Claude Code

> /ultrareview 1234

Session recap CLI

Switch focus away from a session and come back to a one-line recap of what happened while you were gone. Helpful for staying in flow while running several Claude sessions at once.

```
claude - auth-refactor | claude - billing-migration
● Read(src/middleware/auth.ts)
  | Read 218 lines (ctrl+o to expand)
● Read(src/middleware/roles.ts)
  | Read 67 lines (ctrl+o to expand)
● I'll split this into validateSession and requireRole.
● Edit(src/middleware/auth.ts)
  | Applied 3 edits to 1 file
● Write(src/middleware/validateSession.ts)
  | Wrote 84 lines
● Write(src/middleware/requireRole.ts)
  | Wrote 52 lines
● Grep(pattern: "authMiddleware(")
  | Found 6 call sites
● Edit(src/routes/admin.ts)
  | Applied 1 edit to 1 file
● Edit(src/routes/api.ts)
  | Applied 2 edits to 1 file
● Bash(npm run typecheck)
  | ✓ no errors
● Split complete and typecheck passes. Tests still need to be written.
> where were we...
```

Generate a recap on demand, or turn the automatic one off from `/config` :

Claude Code

```
> /recap
```

[Interactive mode: session recap →](#)

Custom themes v2.1.118

Build and switch between named color themes from `/theme`, or hand-edit JSON files in `~/.claude/themes/`. Each theme picks a base preset and overrides only the tokens you care about. Plugins can ship themes too.

Open the theme picker and create a new one:

Claude Code

```
> /theme
```

[Terminal config: create a custom theme →](#)

Claude Code on the web web

A new look for claude.ai/code that matches the redesigned desktop app: sessions sidebar, drag-and-drop layout, and a refreshed routines view. Key parts were rebuilt for quicker responses and a more reliable experience.

What's new in Claude Code on the web

- 1/ New UI
- 2/ Speed and reliability
- 3/ Work across web, mobile, & CLI

`claude.ai/code`

[Claude Code on the web](#) →

Other wins

- + **Vim visual mode:** press `v` for character selection or `V` for line selection in the prompt input, with operators and visual feedback
- + Hooks can now call MCP tools directly via `type: "mcp_tool"`, so a hook can hit an already-connected server without spawning a process
- + `/cost` and `/stats` are merged into `/usage`; the old names still work as typing shortcuts that open the relevant tab
- + `/config` changes (theme, editor mode, verbose, and similar) now persist to `~/.claude/settings.json` and follow the same project/local/policy precedence as other

settings

- + **Forked subagents** can be enabled on external builds with `CLAUDE_CODE_FORK_SUBAGENT=1` : a fork inherits your full conversation context instead of starting fresh
- + Native macOS and Linux builds replace the `Glob` and `Grep` tools with embedded `bfs` and `ugrep` available through Bash, for faster searches without a separate tool round-trip
- + Auto mode: include `"$defaults"` in `autoMode.allow , soft_deny , or environment` to add custom rules alongside the built-in list instead of replacing it
- + Opus 4.7 sessions now compute against the model's native 1M context window, fixing inflated `/context` percentages and premature autocompaction
- + Default **effort level** for Pro and Max subscribers on Opus 4.6 and Sonnet 4.6 is now `high` (was `medium`)
- + `-from-pr` now accepts GitLab merge request, Bitbucket pull request, and GitHub Enterprise PR URLs in addition to `github.com`
- + New **claude plugin tag** command creates release git tags for plugins with version validation
- + `/resume` on large sessions is up to 67% faster and now offers to summarize stale, large sessions before re-reading them
